THE present edition of Stormonth's 'Etymological and Pronouncing Dictionary' has been carefully revised throughout. Every effort has been made to give a substantial representation of the new words that have been received into standard usage during recent years. Of the large number of new words to be met with in general literature, there are very few, it is believed, that are not included in this edition of the Dictionary. Much attention has also been bestowed on the etymology, in regard to which so much progress has been made since the original publication of the book. Where very wide and thorough research has been made, it were impossible to particularise as to the authorities on this head. But it would be equally impossible not to offer acknowledgments to the admirable philological work of the editors of 'The New English Dictionary' of Professor Skeat, and of Messrs Kluge and Lutz. The editor takes this opportunity of expressing his obligations to these scholars. One or two points with reference to the etymology have to be specially mentioned. In words of Teutonic origin, there have been added to the Anglo-Saxon root-word various cognate words. These are introduced by the contraction "cf." (L. *confer*, compare). A second new element in the etymology is one which, it is hoped, may be of real utility—namely, the invariable marking of the quantities in the root-words. The method of marking is that of 'The New English Dictionary,' where, with the exception of the short quantity of the Latin infinitives, only the long marks are printed.

As a permanent introduction to the work, it is thought that the repetition of the author's GENERAL PLAN may be of service. It is as follows:—

## GENERAL PLAN.

The Dictionary words are placed either in groups or in single entries, and are printed in bold black letters. The words grouped are: (1) those which are naturally derived from the leading or key word of the group; (2) those which are connected intimately with the leading or key word in etymology or signification; (3) frequently a few words are grouped together as a mere matter of convenient arrangement. This system of grouping presents at once to the eye all the derived and related words, and phrases in good use.

The leading word of a group, or of a single entry, is followed by the abbreviation indicating its part of speech, and by a re-spelling for pronunciation, and this again by the etymologies, &c., enclosed within brackets; after which come the definitions, separated from each other by semicolons. The subsidiary Dictionary words, with their accompanying definitions, &c., are separated from one another by colons, and are only accented when not phonetically re-spelt or but partially so. Phrases, idiomatic expressions, and short proverbial sayings have been extensively introduced into those groups with which they have a natural connection. Great care has been taken to explain these, and to trace their origin as far as possible.

In the spelling of words the form warranted by good English use is given, and notice is generally taken of particular or contradictory usages. Exceptional and irregular plurals of nouns have generally been inserted after the singular forms.

Most laborious care has been exercised to render the work accurate as a book of reference for the terms in use in every department of English speech. The great object aimed at has been to give a very wide reflex of the English language in all its living departments; in its ordinary spoken and written speech; in the terms employed in the arts and sciences; in the words in use in men's daily avocations; and in the terms of provincial speech and familiar slang. Besides being a complete English Dictionary in every one of its departments, the book will, from the extent and variety of the information given, in a very considerable degree supply the place of an English cyclopædia.

## PRONUNCIATION OF WORDS.

*Note.*—(·) is the mark dividing words respelt phonetically into syllables; (ˈ), the accent indicating on which syllable or syllables the accent or stress of the voice is to be placed. The marks (˘) and (˙) above the vowels are to be understood as having relation to the character of the sound alone, not to the prolongation, or the reverse, of the sound—that is determined in ordinary cases by the accentuation of the word. The mark (˘) above the symbols *ā*, *ē*, *ō*, and *ōy*, designates these as diphthongal sounds.
